

DiaDENS PCM Overview Workshop Transcript

How it works - How to Use and Safety

December 14 2014

Benedick Howard host

What you get"

Overview how to use the PCM settings *for a huge range of situations -*
My 3 reasons why SCENAR/electricity is so beneficial and why and what electricity can do -
Case studies, tips, and safety

4 PM Hawaii time

Benedick: My name is Benedick Howard. Let's get going with a circle of introductions...David, how can we help you today?

David: I've always been interested in a SCENAR device, so any additional information I can get on it is very helpful to me.

B: Is there anything specific that you'd like to hear?

D: I feel a lot of shoulder pain on and off, that was my basic interest in it, and some intestinal issues. So I want to know how I can benefit from using the device in those areas.

B: Thank you David for sharing because that's a great help for me and for others to understand what they can get out of this teleconference together.

B: Linda, what would your needs be?

L: It's informational at this point in time. I can give you the long list of things that needs fixing, and I wonder if this can address all those things. My son-in law has gas, my grandson has autism, gastroenteritis and neck pains from a kyphosis. My daughter gets migraines, my mother has a neck problem, my sweetie has knee problems, and I have chronic fatigue. So will this help any of those things?

B: Oh my God, what a weight on your shoulders, we'll get to you in a moment...

T: Tom here just outside of Buffalo. I've got a little back pain resulting from a compression fracture a number of years ago. My wife has an arthritic cyst on her foot that makes it hard for her to walk. So those are the two main things.

D: My name is Diane and I bought a SCENAR new about 7 or 8 years ago. I've never been able to figure out how to use it. I was promised a training course with the purchase and

I've never received it. So I am interested as I have just not been able to use the product that I have.

B: Which model do you have, Diane?

D: The RTM Pro or the shorter home unit with the long handle.

B: So you've got one of the professional ones, cool.

L: This is Linda again, I think I got cut off. I need some information. I have a family that has a sundry of different types of ailments. Autism, osteoporosis, chronic fatigue, migraines....

B: Okay, I am with you. Specifically for you, what would it be?

L: For myself, it would be for adenomic problems, I have something called dysadenoma. It's a dysregulation of the sympathetic and parasympathetic nervous system that causes racing heart and a drop in the blood pressure. Now I don't know if this addresses that, but this is my need, and I have a family all aches and pain.

B: Right, but we'll stick with you for the moment while addressing the other issues as well, so we can keep you fit and healthy first, and then we can work on the other people. I think a couple of other people called in, and we couldn't hear them well either. So I'm going to go into a mute mode for a moment and get back on the script that I wanted to deliver. It is the 3 reasons why working with the SCENAR or with electrical medicine is so beneficial, and let me give you that information first.

All of these types of SCENAR work on electricity, they use and deliver electricity, and it is the fundamental property of electricity why SCENAR has such a deep, deep effect on our organism. However it lies with the true understanding of electricity, not with the disinformation that is being given out or taught in universities and taught to us in particle physics and taught to us erroneously in electrical engineering. It is the opposite of what we're taught.

I did electrical engineering and I remember when I was at school I was challenging the professor saying, "how come you don't understand what exactly electricity is or why it behaves this way. Yet we've got formulas that express it and which are supposed to expect an engineering behavior." To me it seemed kind of strange that they basically did not understand what this substance really was. I knew about Nicola Tesla for a long time, but it's only been recently, like over the last 2 or 3 years that I've been introduced to some of the new work on electricity, and really what it is in electrical engineering and what it does in order to create the results that we get.

In the very small area within the electrical medical field we know from history that electricity has been used for all sorts of ailments dating back to Roman times, where bathing with electrical eels was used for depression and pain relief, with patients wading in those sauna baths with electric eels sparking up their legs, so that was really intense. However SCENAR isn't anything like that of course! The way the SCENAR delivers micro current electricity, the particular wave form, and the voltage to the body is nothing but relaxing, tingling, soothing, beneficial, and energizing. It's like charging your body like a car battery.

To stay with that comparison, using a SCENAR is like driving a car, and each different SCENAR model is just like driving a different car. Keep this concept in mind, because this is so important and crucial to the training that I will be offering. This is the fundamental concept to understand, that the body is like a car battery, no matter what the health issue might be, so in Linda's case, the SCENAR would address all of those issues and complaints. So when we apply the device, what happens is that electrical energy, like charging up a battery, is poured into that area bringing the charge higher than it was before. Supplying electricity to the cells sparks all of the internal mechanisms within the cells, all the biochemical reactions that are cascading out of that interaction to bring about dramatic results. So now the lights are shining brighter, so to speak. The body or that area is now ready to detoxify and rebuild the damaged tissue very quickly no matter what problem it is, just look back to the old clinical studies from the 80s!

In these classical Russian studies that they were doing then on 18,255 people, they got like 88.50% cure rates across a wide range of disease groups. And what I can say from the work that I've done with the SCENAR, with this type of technology we are not "treating" anything in a classical way disease spectrum, and I am not a doctor or a medical practitioner, I cannot diagnose and have no license to "treat" any disease. We're literally just looking for areas that are low on electrical energy from whatever the condition is and bringing the charge back. The device is able, especially the PCM, to measure and really help us pin point areas where we need to go. So that's very exciting, and it's very easy to do, which is even better. .

If you have several areas in the body, and it can be from a huge, long list of stuff what's going on there, when we can pin point and charge up those areas, it's a whole cascade of effects that is happening, from the bio-chemical or bio-electrical reactions and responses, that are going on inside the body, to the overall emotional states an organism goes through in a recovery process. The organism is being picked up to vibrate and be energized at a whole new level. So the very aspect of electricity being energy in this case tells us a huge amount of what to expect or anticipate in terms of using these types of devices.

People who buy these units and who know what the results could be, unfortunately get intimidated by them, and quite frankly with the more expensive high end units, it's not difficult to be intimidated by them. The old DENAS classic with the curved handle, that I got used to and loved to sell about 8-10 years ago, was so simple to use and you would get results. Now you need guidance with the PCM because it's got 97 different settings! The default 77Hz frequency is just one of them (that you will use 90 percent of the time), and we'll look at those other frequencies in a moment, and also at the scan mode, which is how to measure how charged an area is. That way you can graph results and ongoingly set goals around that, which I cover more in the personal one and one coaching that I do.

Now the ongoing effect of the electrical energy pouring into the body doesn't stop because you came in with a neck pain and you got rid of the neck pain. It offers more results than just taking care of the initial pain or problem. The secondary, tertiary and fourth problem will be popping up from time to time, as you increase the electrical energy in the body and make it more healthy and vibrant, and the immune system picks up. The blood cleans and a lot of other systems start to normalize.

So it's like looking at the normalization of an electric field, which of course the body is, with its meridians, electrical meridians, acupuncture meridians that web throughout the body systems. As you tingle them with the electricity from these devices through these lay lines in the body, it is being normalized and charged up and made more vibrant, too. So it's not just that you've got this broken bone and I am not using this as an example of what could be achieved but statistics have suggested that, yes, it is highly probable (and I've seen it myself but can't make any claims around any of this), so it's like nonetheless the broken bone that was charged in the appropriate manner will mend itself a lot quicker, (I didn't want to use the "H" word there). And in that repairing process, part of the stuff with working on, say a back injury, is to keep that movement happening and to set higher goals, like more exercise or starting to do yoga twice a week or every week, or what will get the muscular- skeletal system more active, and a lot of the problems will start to diminish.

I can't stress this enough, the usage of these devices is so spectacular. I can vouch for that and that's why I can tell you this right from the go get, it just keeps on giving and if you do have any problems and there's been a whiplash or something like that, you can take those kind of situations very quickly and correct them. The people that I've worked on, with that sort of injury, the pain was so extreme and the relief so extreme again that they'll burst out in tears, and it's just a beautiful experience. So those sorts of things can be done with a lot of practice and so in that case it's one of the ninja techniques that I teach and it's really a ninja situation. We're literally using the ability of certain locations of the body, nerve bundles for that to contract muscles, and that straightens out, in this case, the cervicals. Then the neck pain goes away, finger tips stop tingling and so all of that gets taken care of.

It's been quite interesting for me to explore why electricity does what it does, and the same for the hundreds of people that I've worked with in training and of course the other people who have listened to those trainings and gone through since. I've had this collection of 1450 pages of transcripts from years of teleconferences like this one, but these were actually with people in training with me and these were coaching conferences. So actually they could really recognize the long term benefits through a long term association with my expertise.

With all of these devices it's fundamentally electricity as the basic driving life force that's poured into the body, invigorating it and bringing it to a higher level, where in the process it becomes a whole cascade of things to happen throughout the body system. And as that cascade ripples through, new sorts of levels of consciousness start to emerge from the individual and things start to peel off like the onion peel.

I did a lecture a few months ago on the healing effects of electricity, and one of the biggest themes was, electricity is a very powerful, very cheap antioxidant. So you can anticipate the electricity or the SCENAR type technology will really accelerate all of the antioxidant type of processes when you load the system up with antioxidants. For instance I've been doing a lot of vitamin C. As it so happens in Hawaii this time of the year and actually for the last 4 month we had an abundant harvest of lilikoi fruit and we've been making juice, and drinking that juice that's so vibrant, I've noticed how things have changed dramatically in my body from that load of extra vitamin C every day. I would estimate, it's probably 5-10 gm per glass, and so it has been a real powerful cleanser. Well, it's the same thing what electricity does, and in this case the electricity in conjunction with the vitamin C, accelerating the process.

Now let me get to the electrodes which deliver the electrical signal through the skin and why the different pads and electrode sizes do matter. The smallest electrode is the acupuncture probe. With that you can do real detailed "surgical" work, like working on the attachments of the muscles to the bone for instance, where you have very tender or painful spots. If you had a torn muscle or ligament it would heal very quickly, like dramatically so. I've experienced that on myself several times when I had injuries from the Ashtanga yoga practice that I do. The acupuncture probe is also good for doing cosmetology and working on the meridians on the face or the meridian points in the ears, hands and feet, all of that is highly beneficial.

The next-up-in-scale class of electrodes is the massage set. The best part of it is the comb, and it's like an acupuncture probe but instead of one prong it has got like, I think, 46 prongs on it, and each one of those is charged differently. So if you can't get into an attachment of a muscle or into a hip joint, knee attachment or shoulder attachment or wherever that pain is, then you can now get into a bunch of them all at once with this comb which makes it

much easier. The comb set is also good for tendinitis or those instances where you want to soften tissue. Actually I just put up a blog on the website yesterday on scar tissue and I don't know if you've seen it yet. I need to broadcast what it does for scar tissue softening, how it works and why it does what it does.

Then going up to the next set, let's go for the goggles first. The goggles are kind of interesting because they are using a rubber that's the same as they have in the pad set, and the rubber somehow has an electrical medium that all of the surface on the rubber is somehow oppositely polarized, and you get tingles from multiple locations across the pads, or in case of the goggles, around the eyes when you place them on there. So what the goggles do, the electrical energy around the eye ball or the eye socket initially charges the meridian at that point, and it also delivers electricity into the trigeminal nerve right underneath the eye ball. So that's very good at driving energy in there and releasing toxicity in the eye if there is stress, and the goggles are very good for relaxation also and they are really handy for doing eye stuff.

Then of course there is the pad set which makes life so much easier, if you've got back pain or other pain in the body. Instead of putting your unit on your back and holding it there, now you just stick those pads on your back, plug in and set the timer for 30 minutes and let it tingle away while you do your work, drive, or whatever you are doing while having your hands free that way.

Here is an important one: the biggest mistake people make when they are getting a SCENAR, especially if they don't go for the training, is that they don't use it enough.

Another big hint: Keep it simple as you don't have to use those quick start settings. In fact the quick start settings kind of limit your experience and they were only developed way after the initial settings were created, which are the different frequencies of 10, 20, 60, 70, 140 and 200 Hz. Then you have frequency sets which are the 10 Hz, and the 77Hz. And then you've got the 77 AM, which means the signal is turning off and on every few seconds, so it's on and then it's off, and on and off again, and so it's kind of like soothing and allowing the body to relax and go deeper. The 77/10 feels like multiple frequencies with spikes or beats to it, so it has kind of an awakening or invigorating effect, and it combines the fast 77 Hz with the 10 Hz which you may know is way down into the midrange brain wave frequencies.

So each one of these frequencies does different things, and most of the SCENARs will turn on at the default to 77, or 60 or 90 Hz or 100 Hz., that frequency range, and here's a secret, and if you got a pencil write this one down: if in doubt, use 77 Hz for 90% of the time. However, if you've got pain, use the 200Hz because it numbs it out. Once the pain is numbed go to the next pain spot, or go back to 77 Hz.

So we not only have all of these, but also what is the most important set of frequencies, which we call infra frequencies, the ultra low from 1.0 Hz to 9.9 Hz in the PCM. You can dial up different infra frequencies that correspond to different conditions or disease groups, e.g. 8.1 Hz is good for the respiratory system, and there are a whole bunch of different frequencies in there for different conditions. So you've got another way of delivering electricity but in this case it's highly specific. Healthy organs will have specific frequencies. These frequencies are not so much about charging up the batteries (e.g. at 77 Hz) but about harmonizing the cells. So you'd use these at the end of the session to harmonize the body and get those harmonics happening.

You know it's quite amazing how simple it is to use and in that sense that really is not a limiting factor. What I am trying to say is all of these devices work exceedingly well, period. Why it doesn't work for some people is, because as I said earlier, the number one reason why most people fail while using the SCENAR or this type of technology is, they **don't use it long enough**. No matter what the situation is for you, if you don't use it enough you're not going to get the benefits. The problems that we are all faced with are very wide and varied right now, they are more difficult, take longer and you must do all of the other stuff in conjunction with it. I mean lifestyle change stuff, to get long lasting results, unless you just want to get rid of that pain in the hip.

So many different things can happen, for instance in my premium coaching training one of the ladies had wanted a PCM and had bought into my training back in October and I think it took like two and a half weeks before she got the unit and got it going. Later on in the month her mother had a stroke. This lady is a medical professional so she recognized it right away, and because she understood the flat battery equation, she knew what to do and kept working on her mom I think 45 minutes or so. Her mom by the evening was tired, and the next morning she got up and denied that she ever did have the experience. We know that about stroke from acupuncture, as long as you get it within 24hours.

These devices in that sense are kind of like having a hospital on hand. Believe me, I am the type of guy who used the SCENAR for years before I could ever understand that it's like a hospital in your own hand, literally. Last year I used it for my tooth pain and I learnt so much about the complexity of using electricity on my face, very complicated nerve system stuff and muscular stuff in the face, not so easy. It's not like doing a lower back where the pain behaves differently, as it charges up very quickly in the face and the inflammation from the tooth infection made it more tricky, anyway, that's what it was like for me.

I don't know if you know that, but a block wall fell on my head when I was a kid, and that's what took me on this journey. Back then there was no chiropractic around, and I suffered from excruciating neck and buzzing pain in my ears and that sort of compression in my cervical and then later on in my lower back. I was heavily into car racing then, and I used to

build my own motors and tune them and stuff. I lifted an engine block one day and it was too heavy and I hurt my lower back. It didn't cripple me but it was extremely painful especially when I was stressed. Over the years it got better but it really wasn't until I got a SCENAR and then went way beyond what I had learnt from the Russian master training and professor Revenko's work, and understood myself how to fix that stuff. Now my back is completely different. It made huge advances. So what happens is that you may get relief initially for a day or three days but then over time as the body becomes more electrically charged that relief lasts longer and longer and other big changes will happen.

With the PCM you've got these ultra low or infra frequencies for basically resonating the natural frequency of that organ, or whatever tissue that you are tuned into. The other set of frequencies which are above the 10, 20, 60, 77, 140 and 200Hz all do different things. E.g. the 10 Hz and 20 Hz are calming and in the brain wave frequencies range. And the 60 and 77Hz you would use 95percent of the time.

If you need to numb out the pain, initially use 140Hz, or for a quicker result, 200Hz for a few minutes until numb, then change back to 77 Hz. You get a lot more electricity and power from the higher frequencies, and with the same power level you will feel it more, because it's resonating at 200 cycles of charge per second compared to 77 cycles per second. It's feeding in a lot more electrical energy in a given time frame, and so you get a lot more results quicker, and that's what we love about this stuff.

Now I haven't touched upon the mid-range of frequencies. Why are they the default ones that we use? There is lots of stuff I could talk about in here, but I am going to keep it simple for now, so you can get the real benefit of understanding, and then you can build different models on it yourself.

The nerve fibers that we are really looking to work on are the C fibers or the unmyelinated C fibers. They have the ability, according to the Russians, of being able to manufacture or release a huge variety of peptide or protein materials. These are later synthesized into more complex proteins or hormones or enzymes, life giving or life building components, that can quickly reciprocate damaged areas in the body. This would apply to a broken bone or torn ligament, or just an area that is highly compromised, e.g. in the liver from alcohol toxicity, it really doesn't make any difference. And this is the hard thing to understand for many that electricity can have an effect on such a huge wide range of things in the body.

It's difficult to understand that it's just one electrical signal, the electricity, or the power component inside the electricity which is life giving stuff, that's why it does what it does and it is quite remarkable. In that sense it makes life for all of us, using this technology, a lot easier, you just apply it. Basically I have told you all you need to know about applying it and how to get going. The ongoing stuff is more looking at the goals that you hope to achieve and staying on track towards those, and looking at the different issues that come in

between that, and where you want to go, that's what I do in the coaching. You just work with any of the situations that you brought to the table at the beginning of this conference. The shoulder pain, the back pain, the wide range of stuff that Linda brought in, and Diane, I hope that you have now understood a bit about how to get your device out of the drawer, get it some new batteries, turn it on and start to use it.

There is just one other thing that I would like to introduce to you, it gets a little complicated but you should know it. I mentioned earlier that with the device we are able to measure how charged an area is, and that's kind of interesting because it means that you can find and locate areas in the body that need work compared to areas that don't need work, and sometimes it's on the opposite side of the body.

So you can locate these areas quite quickly with the PCM in the screening mode. Let's say your car battery is low and you have to get it jump started with enough electricity so that the engine will start and it's been running and charging the battery for 20 minutes or so and when you turn it off and sure enough it will start again. But that battery, if it's only been charged for 20 minutes, it probably isn't totally full yet. So how full your body is at various locations on a day to day process allows us to discover small asymmetries that are going on and predict when the system is about to go into a big change so you can understand what's going on and take remedial action for when the energy is shifting.

What do I mean by that? Let's take the back as that's huge. As you may know from a chiropractic point of view, if you have pain somewhere it's usually because of some twisting somewhere in the spine or some complication that's going on, maybe you got whiplash, or the lower back hurts and you have compensated over the years for that postural change that was necessary in order to manage the pain. When you're working on the back you can quickly locate where it is you need to just work on that one area that day. And it changes from time to time, especially after you get things moving, things would change for you. So you can use the diagnostic screening, a more advanced use for sure, to make it possible to locate low charged areas and do things quicker.

The DiaDENS PCM price is absolutely amazing for what it delivers, with all of the functionality of the unit itself, let alone the proven track record of what it can create for people. I use it sometimes daily, if something is bothering me or if I just have some stress or strain. Maybe my tummy is upset, it's great for indigestion and digestive issues, the electricity quickly feeds in there and energizes very quickly. Sometimes I use it in the mornings when I first get up just to brush myself down to energize myself; other times maybe I am working at the computer too long and I use it for the back of my neck or wherever I am feeling stiff or the goggles for eye strain – the new design fits very well.

I had an interesting experience from a sports injury point of view and also for people who have a lot of repetitive injuries: I have been learning how to play the ukulele in the last 10

weeks going to lessons every week. Whenever I tried to reach the fingering, never having played before, it was very difficult for me to get the stretches. Five minutes of playing or trying to hold those cords was really problematic and painful in the tendons of the fingers, wrist, and arm all the way to my neck. I would take the device, brush my arm up and down on standard 77 Hz setting with a power that's comfortable and brush it up my arm and at the side of my neck where I had like a crick in my neck at that stage. And what happened, by using the electricity and then brushing at the back of the neck and into the jaw where I could feel that tension, too, the 77 Hz signal quickly removed the pain and re-educated the tendons and muscles. Ten minutes later I played the same chords better and could reach the chords easier and without pain, and when I stuck my arm out and then went back to playing, the muscle memory was there that I could reach better into that cord. There is a lot to be learnt from this technology, and a lot for it to be used for. Maybe you have seen Chris' burn video that was done with a simpler unit than you're getting with the DiaDENS PCM. As I said earlier, simpler units are like the classic 2 speed DENAS because you can get results and you don't have confusing settings to choose from.

I think I have given you a great overview of and additional information about how you can use this device for a huge range of situations and I have given you a good thorough explanation of why and what the electricity does. It's vastly complex and at the same time just really think of it simply as charging up the batteries of the body and bringing up the power on those batteries so that they vibrate more and you get more life and vitality. Other things just take care of itself. Don't be afraid of using it or overusing it, no one has ever died from using a SCENAR, its totally safe. In fact some of the high end units have a defibrillator on it too, so you can use it for that type of situation. Here is another interesting experience, I think it was about three mornings ago. I woke up and had like tremendous pain in my rib right on top of my heart and I used the SCENAR to get unto the tissues, the connective and muscle tissues between the rib and on the rib cage there and tingled away. The pain was really stubborn and took about 2 or 3 ten minutes sessions to clear away and it did. It didn't last for long so it was like 2 or 3 maybe 4 sessions and by noon it was gone and it never came back. It's good for that type of acute situation. Another reason why I gave that example was that it doesn't damage the heart or any of its rhythms. For some people that are sensitive that have compromised main system situations it is just a jolt to the system and in a nice way. In another way it works for your immune system. When your immune system has lost the energy vitality level it's so compromised that when you start to jolt the system with electricity these things can quickly start and move forward.

So that brings me to the last thing I want to talk about today which would be the importance of understanding and appreciating what a healing crisis is, and that the healing process is like the peeling of an onion. The healing process of the body is that it moves from one vibratory level or energy package to a higher energy package that tends to give you more energy. I have been getting back into running. I have an uphill drive way that I

run up and down and it really gets my heart beating and keeps my vitality going and it makes a big difference. When you get that vitality back things that you long to have done or could have done will become available to you. So don't stop dreaming with this stuff as it's a whole new medicine which is vastly misunderstood. In my opinion it's also vastly suppressed because it simplifies the whole medical drama situations we are faced with, their complexity and what these universities and researching facilities have done to it. Let me give you an example. Chris's burns could not have been affected that way and heal so fast if it wasn't for SCENAR electrical signals. It stimulated the release of stem cells that differentiated into skin tissues really remarkably quick. So the stem cell research baloney comes from compartmentalization, and we have in these devices phenomenal stuff. It's such a new science, this way of looking at electricity is such a new model that we really don't have the right language yet to explain what is happening from those higher energy levels as they spiral in and bring in these different types of life giving forces, how these currents come in and how they interact as they come into this place. It's got the energy of a pure light bulb. It can be used that way to fire up your computer screen or listen over the phone here and now. It's just been a hidden thing and for some reason we are awakening and for some reason you guys were on this call today to learn more about it what it can do for you and it's such a remarkable thing, I have seen extreme examples like this stroke victim: A client's daughter had AVR and there was a nocturnal collapse in the neck and she was in the hospital quick enough before she could have died from it. She survived, but I think the right hand side of her body became paralyzed. With the help of SCENAR application, a lot of it, like 12 hours of application brushing all of her body down, within 3 months the girl, by holding onto the side of her wall was being able to move around and she is now smiling on both sides of her face. She is not crippled but able to support herself and being part of the family at home.

Just thinking of one of the other questions someone asked, in terms of the wide range of effects which bringing energy into the body can have: in the end you really need to give it a good chance and really commit to actually applying it. Like Diane, forgive me for singling you out, but you know, it really is in the application and the motivation that you have to keep going with. I have one guy who was asking me about pain in his ankle and he's saying he's trying it 3 times a day. Well, if it isn't going away you aren't applying it enough, and with the formula I was telling you about using the high frequencies for pain, that would be the way to start.

So it's been a pleasure to be on this call with you guys today. I will be sharing a copy of this, if you need it, you can listen to it later on. I suggest you make a copy and save it to your desktop because it's got really all you need to get going with applying this device. I will be doing an orientation teleconference early in January, after everyone gets a unit as it takes about 2-3 weeks to get them, and I do recommend of course that the DiaDENS PCM, the English version, is the way to go. I know that Dr. Tom here who is on the call with us today

has the Russian version, and he has had phenomenal results. It's been amazing to hear him as he's been able to work out the Russian words and grab the meanings. I would just go with the extra \$50.00 and get the English one, so you'll be sure you'll be able to turn it on at anytime or give it to a friend and turn it on at anytime and be able to explain to them which setting to use, it's a good deal. I am going to be putting up the prices tomorrow morning and I am not quite sure what I am going to be doing with that. I am waiting for an email back from Russia about that.

It's so great to be working with them in this manner to bring glory to slash pricing to you. It's just limited timing but you have the links to the web page, if I can find it myself I should probably tell you over the phone but it will take me too long, I think, to find it. It's been great being on this call with you guys I just want to keep it to one hour. If you have any other questions about delivery or multiple units, I know, Tom, you wanted to get a bunch of them. Let me get the price on that so we can ship them all together or to whatever locations that you might choose. We will bundle them up somehow and you will have them in like 2-3 weeks. The orders will be going through next week, we had a bunch of orders last week so those will be going out this week, too. It's very exciting to be bringing this type of "hospital in your own hands" technology to you at this price, it's quite remarkable, I believe. All the best. If anyone has any questions I will be happy to take them right now.

Tom: I clicked on your website and found no one in all my research who is better informed, who can explain better or knows more than you.

B: Thank you Tom, I really appreciate that. It's been a gift to be able to look at the situation of what these devices do. It's a real gift to be able to follow and demystify some of the stuff and bring it into terms that's real practical for people to understand like charging the batteries and stuff. From there we can build more complex models but to begin with, if you have a flat battery, charge it up. That's what these devices do.

T: Thanks for putting it on. I am off...

B: Okay Tom, all the best to you, anyone else?

L: Actually this is Linda from Ventura: listening to your talk, you covered just a huge amount, and I only understood half of it. My understanding is that we purchase the unit from you, and then you provide us with the training of how to do the algorithms and how to look at asymmetries, what areas of the body, and if you're doing a scan what that would indicate. It's sort of like a bio feedback mechanism from what I have read.

B: In order to answer that quickly: I do have training packages, they are not included in the sale obviously at this price. What I do at this price is give you an orientation teleconference. You said you understood half of what I said and that is great because you

have some of the fundamentals in there from which you can build. Your orientation teleconference is in January, and we will be going over the packages that I will have available. At the moment my training and coaching programs are closed so I am not taking anyone on at the moment. I am just working building up people, telling people about it, educating them about it, that's the phase I am at the cycle with you guys. To do all of the different aspects that you are talking about it takes some skill. I do have back office training videos that cover it, some of them are mind maps and other things but those things are not included in this price.

L: I guess my question is then, what would we need in addition to the unit to be able to have enough skills to get benefits?

B: Everybody is different on that, Diane, but you do get results very quickly. You all get results very quickly, so what I think you should do, Diane is, listen to this recording again, and I hear your questions and stuff. There is enough information for you to listen in this call, and just digest it and really sit with it and see if it's for you right now, doesn't matter if it's not. There is no pressure on you one way or another. I have given you a ton of different examples in the call that I have shared with you to help people understand that this process, when you look at it from a flat battery, is simple. That's all you really need to know for now, Diane. You're just going to locate those areas that are usually pain spots and you just start to work from that spot.

L: What you're suggesting is, initially you're going to go to areas of discomfort and start there?

B: Well that's going to be all covered in the training, and yes, you are correct on that but how we do it is all covered in the training.

L: The training to me sounds like an introduction to being able to use it, to charge it, being able to turn it off and on. It's a functional thing, but there is additional training, to be able to understand how to use it therapeutically.

B: Yes of course those are two different ways of looking at it. Actually it's more than that but that depends on which level of the training program you're getting into and that's what I am going to talk about and address in the teleconference in January. Right now what I wanted to cover was how to answer your questions so that you have those. There is going to be a multitude of questions that can come up, but we're not on that level yet. If you feel that I would be the person to work with then let's go ahead. If it doesn't resonate with you not right now, that's okay, too. No pressure on you whatsoever. If you do commit to work you will be having results before the teleconference in January to begin with because in a week or two you are going to have a device. If you do need the additional advice you can

listen to this training or this tape that we have just made and you've got all of the stuff to get you going really well.

But in situations kind of like what Linda has which is a huge wide range of different situations you're going to have to come into one of the premium trainings in order to address all of that stuff. But first off with Linda it is to get her well and working on herself so she can use it on someone else later.

L: Just one other question, I'm sorry , but I am very interested, so all of these questions are being prompted by my interest, honestly. When you were talking you mentioned that there were additional things like probe and goggles.

B: Yes, have you been to the website and looked up the sales page?

L: I don't have that memory, so maybe not.

B: Linda, that would be the first thing, I don't want to go through that conversation again. I am 10 minutes late for another call with my kids. This is our Sunday call time so I really need to jump off here, I am sorry to cut in here. If you go to the sales page you will see about the goggles and the different things you can get, Linda, and if you have a question email me. Keep it simple, keep it to one point at a time. Obviously with the situations that you have, I think this is the answer that you need. Get the professional package and we've got you covered.

L: The professional pack, okay, I'll look it up on the website. Enjoy your children.

B: I am closing out for December 14, 2014 and that was the PCM teleconference, my name is Benedick Howard.
